

Abstract

The goal of this research project is to create a Google Chrome extension called “Quick Browse,” which will make navigation easier for all users on Chrome to browse around the web-pages, in less time. Google Chrome has been phenomenal, and many people prefer Chrome over another web browser because it is very user-friendly. However, the browser does not have all the best features available, so it is important to take advantage of the Google Chrome Extension tool to create the necessary changes, which is why “Quick Browse” is needed. This problem is important to fix because many users waste countless hours on the browser clicking around the webpage. The “Quick Browse” will speed up the process for the user to get to their destination webpage. It will allow a user to get more work done without having to spend so much time clicking around the browser. The technology involved in this project will be HTML, CSS, JavaScript, Jason, and Photoshop. Photoshop will be used to create an image, appropriate for the icon of the extension. HTML and CSS will be used to mainly display what is on the browser. JavaScript and Jason will be the code that works behind the scenes of the Extension. The result of these projects will save the user a lot of time. It will allow the user to get to their destination webpage without having to type in the web address all the time, which is much easier, and it saves a lot of time in the long run.

Acknowledgements

This project is supported by the Office of Undergraduate Research at SUNY Buffalo State College and the Department of Computer Information Systems.

Findings/Results

QB Quick Browse (1.0.0)

One Click Search

Methods

Programming languages that are involved to develop this research project are HTML, CSS, JavaScript, and Jason. Photoshop will also play an important role while creating the project.

HTML and CSS will play the most important role while developing the project. It is impossible to run the project without them. JavaScript and Jason will be supporting the HTML and CSS to run the way it supposed to be done. Photoshop will come in handy when designing the image such as logo

Conclusions

Any good Browser are essential to have a good extension such as Quick Browse. Quick Browse will only bring the best out of Google Chrome for all users. Users experience with the Google Chrome Browser will change forever, in terms of time management, quicker search result, and user performance.
